

Navigator Asset Tracker Solution

The Navigator Asset Tracker allows you to manage what your assets are, where they currently are, and where they have been.

- ⇒ Assets can be easily scanned in or out, assigned to a contact and a location and record an expected return date.
- ⇒ Asset Tracker allows you to print reports to show who currently has which assets, or which assets are in a particular location.
- ⇒ The asset database keeps a history of each movement of the asset, showing when it was created, when it was checked in or out, and when it was last serviced, when its warranty expires and the current value.
- ⇒ You can calculate depreciation of your assets with the built in calculator.
- ⇒ With the Asset Tracker Mobile edition, you can complete audits in the field across multiple sites.
